Nature 4(7):157-762(2000).

-1- FUNCTION: NECESSARY FOR EFFICIENT RNA POLYMERASE TRANSCRIPTION

ELONGATION FAST TEMPLATE-ENCODED ARRESTING SITES. THE ARRESTING

SITES IN DNA HAVE THE PROPERTY OF TRAPPING A CERTAIN FRACTION

OF ELONGATING RNA POLYMERASES THAT PASS THROUGH, RESULTING IN

LOCKED TERNARY COMPLEXES. CLEAVAGE OF THE NASCENT TRANSCRIPT BY

CLEAVAGE FACTORS SUCH AS GREA OR GREB ALLOWS THE RESUMPTION OF

ELONGATION FROM THE NEW 3'TERNINUS. GREA RELEASES SEQUENCES OF

2 TO 3 NUCLEOTIDES (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16-OCT-2001 (Rel. 40, Created)

I PENCTION: Riboflavin synthase is a bifunctional enzyme complex catalyzing the formation of riboflavin from 5-amino-6-(1'-D)-ribity1-amino-2,4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-butanone-4-phosphate via 6,7-dimethy1-8-lumazine. The beta subunit catalyzes the condensation of 5-amino-6-(1'-D)-ribity1-amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethy1-8-lumazine (By similarity).

I-CARALYTIC ACTIVITY: 2 6,7-dimethy1-8-(1-D-ribity1)lumazine = riboflavin + 4-(1-D-ribity1amino)-5-amino-2,6-dihydroxypyrimidine.

I-PATHWAY: Riboflavin blosynthesis; last step.
                                                                                         Gaps
                                                                                                                                                                                                                                                             16-OCT-2001 (Rel. 40, Created) | 16-OCT-2001 (Rel. 40, Last sequence update) | 15-UN-2002 (Rel. 41, Last annotation update) | 6,7-dimethyl-8-ribityllumazine synthase (EC 2.5.1.9) (DMRL synthase) (Lumazine synthase beta chain).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PUGCIEC ACIGS RES. 24:4420-4449(1996).

**INCTION: NECESSARY FOR EFFICIENT RNA POLYMERASE TRANSCRIPTION ELONGATION PAGT TEMPLATE-ENCODED ARRESTING STIES. THE ARRESTING STIES IN DNA HAVE THE PROPERTY OF TRAPPING A CERTAIN FRACTION OF ELONGATING RNA POLYMERASES THAT PASS THROUGH, RESULTING IN LOCKED TERNARY COMPLEXES. CLEAVAGE OF THE NASCENT TRANSCRIPT BY CLEAVAGE FACTORS SUCH AS GREA OR GREB ALLOWS THE RESUMPTION OF ELONGATION FROM THE NEW 3'TERMINUS. GREA RELEASES SEQUENCES OF 2 TO 3 NUCLEOTIDES (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-NOV-1997 (Rel. 35, Created)

-!- FUNCTION: POTEWI INHIBITOR OF SERINE PROTEASES (CHYMOTRYPSIN AND TRYPSIN. INHIBITS TIGHTLY HUMAN LEUKOCYTE ELASTASE (HLE). DOES NOT INHIBIT PAPAIN, PEPSIN NOR CATHEPSIN D (CYSTEINE AND ASPARTIC PROTEASES). PROTECTS THE PLANT BY INHIBITING PROTEASES OF INVADING ORGANISMS, DECREASING BOTH HYPHAL GROWTH AND ZOOSPORES GERMINATION OF PHYTOPHTHORA INFESTANCE.
- SUBUNIT: HETERODIMER OF CHAINS A AND B; DISULFIDE-LINKED. DOUBLE-HEADED INHIBITOR ABLE TO FORM TRIPLE COMPLEXES WITH TARGET PROTEASES, BY BINDING SIMULTANEOUSLY ONE MOLECULE OF TRYPSIN AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MANCELLANGOUS: THE SERINE PROTEASE INHIBITOR PSPI-21 COMPRISES TWO PROTEIN SPECIES WITH PI 5.2 AND 6.3, DENOTED AS PSPI-21-5.2 AND PSPI-21-6.3. THEY MAY BE ENCODED BY TWO ALLELES AT THE SAME GENE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CHAIN B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Valueva T.A., Revina T.A., Kladittskaya G.V., Mosolov V.V.;

"Kunitz-type proteinase inhibitors from intact and
Phytophthora-infected potato tubers.";
FEBS Lett. 426:131-134(1998).

-!- FUNCTION: POTENT INHIBITOR OF SERINE PROTEASES (CHYMOTRYPSIN AND
TRYPSIN). INHIBITS TIGHTLY HUMAN LEUKOCYTE ELASTASE (HLE). DOES
NOT INHIBIT PAPAIN, PERSIN NOR CAHERSIN D (CYSTEINE AND ASPARTIC
PROTEASES). PROTECTS THE PLANT BY INHIBITING PROTEASES OF INVADING
ORGANISMS, DECREASING BOTH HYPHAL GROWTH AND ZOOSPORES GERMINATION
OF PHYTOPHTHORA INFESTANS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBUNIT: HETERODIMER OF CHAINS A AND B; DISULFIDE-LINKED. DOUBLE-HEADED INHIBITOR ABLE TO FORM TRIPLE COMPLEXES WITH TARGET PROTEASES, BY BINDING SIMULTANEOUSLY ONE MOLECULE OF TRYPSIN AND ONE MOLECULE OF CHYMOTRYPSIN.
SUBCELLULAR LOCATION: Vacuolar (By similarity).

of multimeric flavodoxin-like proteins.";

1. Biol. Chem. 273:20960-20966(1998).

2. Biol. Chem. 273:20960-20966(1998).

2. FOUTION: Seems to enhance the formation and/or stability of noncovalent complexes between the trp repressor protein and operator-bearing DNA. However, with does not specifically influence the affinity or mode of binding of trpR to its operator. It seems possible that the association may have a structural, rather than functional, basis. WrbA alone does not interact with the operator-bearing DNA; the trpR/trpO complex is probably the major target species. The wrbA protein may function as an accessory element in blocking trpR-specific transcriptional processes that might be physiologically disadvantageous in the stationary phase of the bacterial life cycle.

2. SUBUNIT: Homodimer and homotetramer; in equilibrium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright.
